

KILLS MRSA

Oxivir Tb^{TM/MC}

Carpe Diem Tb^{TM/MC}

One-step cleaner disinfectants formulated with proprietary AHP* hydrogen peroxide technology to deliver fast, effective cleaning performance and 60 second disinfection to hard non-porous inanimate surfaces.

60 Second Disinfection

Methicillin Resistant Staphylococcus aureus, or MRSA, is a mutant strain of the common bacteria Staphylococcus aureus (staph). Staph is ordinarily found in the noses and on the skin of normal healthy people, and generally poses no risk to the person.

Contract Cleaners Supply can help reduce MRSA and VRE infections because we carry a great product [Oxivir Tb^{TM/MC} or Carpe Diem Tb^{TM/MC}] with AHP technology, that only requires a 60-second contact time for surface disinfection. At 60-seconds, you can be confident that your disinfectant is being used in compliance with label use directions, kills organisms of concern, such as MRSA, VRE, TB, HBV, HCV, and HIV.

MRSA is resistant to the standard hospital antibiotic, methicillin. If a person had a staph infection, they

would ordinarily be treated by giving them methicillin (or a derivative). In the case of MRSA, they still have a staphinfection, but the infection does not respond to treatment with most antibiotics, making a MRSA infection more dangerous than a typical staph infection.

Staph/MRSA infections are commonly skin infections, pimples, and boils and are commonly transmitted through hand contact, so high contact surfaces must be cleaned and disinfected to minimize the risk of a staph infection. Handwashing also helps prevent the spread of MRSA.

Carpe Diem Tb^{TM/MC} / OxivirTb^{TM/MC} What is it? What does it do?

Designed for cleaning and disinfecting above the floor, high contact surfaces where disinfection is critical. 60-second contact time ensures compli-

ance and disinfection, leading to a reduced risk of infection with less risk to students and employees.

Based on proprietary AHP technology. Category 4 disinfectant-(least toxic) rating by EPA.

Can be applied with a cleaning cloth on surface, wipe, allow to remain wet for 60-seconds, wipe or allow to air dry. Can also be applied with trigger sprayer.

60-second contact time versus 3,5 or 10 minutes for other chemistries. Low odor, no added fragrance -many products , e.g.. Dispatch, have fragrance to cover odor of chlorine.

Can also be used to decontaminate a blood spill in compliance with OSHA Bloodborne pathogen standards.

CLEAN FOR HEALTH.

MRSA is transferred through skin contact with the bacteria, either directly from one individual to another or on shared surfaces such as doorknobs, tables or towels. MRSA usually enters the body through a cut on the skin and causes mild skin infections such as pimples and boils. These infections can be easily treated by a health professional, often without the use of antibiotics. (If necessary, certain antibiotics to which MRSA is not resistant may be used.) MRSA can also cause more serious infections of the bloodstream or lungs, but these infections are extremely rare in healthy people.

Why we care.

The common pathogenic (disease causing) bacteria are mutating, producing new mutant strains which cannot be treated with standard antibiotics.

These strains have names such as MRSA and VRE. Methicillin Resistant Staphylococcus Aureus (MRSA) and Vancomycin Resistant Enterococcus (VRE).

While healthcare facilities are very aware of these organisms, they are starting to show up in unexpected places, such as recreational facilities, and recently, schools.

Customers in many market segments now have needs for disinfectants that kill MRSA and VRE.

Contact us today to see how we can help kill MRSA in 60 seconds. It is time to take MRSA head on in schools, healthcare facilities and other places where germs and organisms grow.

You can't see, smell, or taste them, but illness-causing germs are everywhere.
